

Enterprise Risk Management

Risk managed at enterprise scale, not spreadsheet scale.

A structured, auditable approach to enterprise, operational and project risk, aligned to ISO 31000 and COSO ERM, with board-level dashboards, risk appetite monitoring and corrective action tracking built in.

A CONTINUOUS RISK CYCLE • ALIGNED TO ISO 31000

01**Identify**

Register risks and capture events as they emerge

02**Analyse & Quantify**

Score likelihood and impact consistently

03**Assess & Prioritise**

Rank exposure against defined risk appetite

04**Monitor & Review**

Track KRIs, breaches and residual risk

WHAT XGRC® ERM DELIVERS

Risk Identification

- Risk Register
- Risk Categorisation
- Emerging Risk Tracking
- Risk Event Capture

Assessment & Appetite

- Likelihood & Impact Scoring
- Risk Appetite Thresholds
- Tolerance Monitoring
- Heat Map Visualisation

Treatment & Action

- Treatment Plans
- Action Accountability
- Escalation & Breach Alerts
- Residual Risk Tracking

THE RISK-MANAGEMENT FAILURES IT FIXES

Registers nobody maintains

Annual reviews go stale before they are presented, and residual risk is never re-assessed.

Appetite set, not enforced

The board sets thresholds; operational decisions ignore them, with no breach escalation.

KRIs reported in isolation

Early-warning indicators sit apart from the risks they monitor, so signals go unnoticed.

Risk and assurance apart

The audit plan bears no relation to the risk register, so high-risk areas go untested.

BUILT FOR THE ENTERPRISE

ISO 31000

& COSO ERM aligned

Board-level dashboards

Full

Risk-to-assurance linkage

PART OF THE XGRC® PLATFORM

Enterprise risk connects to compliance, audit and assurance on one secure, auditable data foundation, so risk is governed as part of the whole, not in a silo.
