

Environmental. Social. Governance

ESG is the popular acronym for Environmental, Social and (Corporate) Governance. These are three broad areas of interest for what is termed, “socially responsible investors.” ESG is also the use of these factors to evaluate companies and countries on their sustainability progress.

Socially responsible investors are considered those who deem it important to incorporate ESG values and concerns into their selection of investments and not solely as a measure of potential profitability or risk presented by an investment opportunity.

ESG Factors

Environmental

The organisational or governmental contribution towards climate change through greenhouse has emissions, waste management and energy efficiency. As renewed and increased efforts are made to combat global warming, reducing emission and decarbonisation are more important.

Social

The inclusion of human rights, labour standards and more routine issues such as workplace health and safety. It important that an organisation is well integrated with its local community so that it may operate with consent.

Governance

A set of rules or principles that define rights, responsibilities and expectations between different stakeholders in the governance of corporations. An effective corporate governance system balances or aligns stakeholder interests and supports an organisation’s long-term strategy. Governance also refers to the standard of government of nations.

ESG Implementation Roadmap

XGRC x ESG

Sustainability

ESG Rating
Calculated from total ESG performance.

Pillar Score
Cumulative score and risk calculated from themes.

Theme Score
The score for each ESG theme calculated.
